0107571 Internet Programming Assignment 2: Responsive Design and Dynamic Loading of a Web Page

Department of Computer and Communications Engineering
Tafila Technical University

1 Assignment

This assignment is a continuation of assignment 1. You need to do the following:

1. Make your design responsive.
2. As your mouse move over any of the items, the mouse pointer should be changed to some other forms.
3. Each item is clickable and the details about it is shown on the whole page by dynamically fetching its JSON file from the server.
4. Once you refresh the page the original page is shown again.
5. For the first item I am providing you with a JSON array for the elements as follows:

```
[{"name":"Fried","description":"Fried chiken is very deleciuos and very light on stomac"},
{"name":"boiled","description":"Boiled chiken is very healthy however it is not that tatsty."},
{"name":"Grilled","description":"On top of a coal fire that is very hot this
kind is cooked and added to it a hot spices"},
{"name":"Alfredo","description":"This is the easiest, creamiest chicken alfredo you will ever make."},
{"name":"Lemon Pepper Chicken","description":"This lemon pepper chicken makes chicken exciting again."},
{"name":"Roast","description":"You need this classic recipe in your arsenal."},
{"name":"Biryani","description":"Chicken biryani is such an easy and
delicious dinner. Served over fluffy white rice, it's hard to resist."},
{"name":"Tamale Pie","description":"A layer of cornbread topped with cheesy shredded chicken."}]
```

   You can copy it into a chicken.json file.
6. For other items you can create your own JSON array and use it.
7. Note that you should have a template for the items shown.
